

Your family today

Families in the current era now consists of not only people, but pets as well. Many families now treat their pets as part of the family, living together in harmony while enjoying each other's company. When humans and animals live together under one roof, the hygiene of their home is of utmost importance.

Regular sanitizers in the market offer short acting protection and therefore require multiple applications within one day. Doing so will damage your skin while exhausting yourself in the process. Hygiene PRO & Hygiene 24 are innovative products which contain active ingredients made in USA - the solution to all your problems.

Hygiene PRO and Hygiene 24 Antimicrobial Shield formula contains–HD⁵. It provides a long lasting protection from germs like bacteria, virus, fungi, algae and protozoa around us; significantly reducing the chances of getting infected by germs.

Hygiene PRO protects houses, hospitals, factories and many more. It can protect you for an entire month with just a single application. Hygiene 24 on the other hand is suitable for personal use. Spray it on your hands just once and you will be protected from germs for an entire day.

Let's take a look on how Hygiene PRO and Hygiene 24 protect our family and pets!

Q: Are Hygiene PRO and Hygiene 24 safe for humans?

A: These two antimicrobial shields are FDA and EPA approved. They don't contain heavy-metals and banned ingredients. Therefore, it is safe for humans, pets, and plants and is also environmentally friendly.

Q: What's the difference between Hygiene PRO and Hygiene 24 Antimicrobial Shield and regular sanitizers?

A: Unlike other sanitizers, Hygiene PRO can be applied to any surface. This layer of protection is wash-resistant, ensuring optimum protection for a month. Hygiene 24 on the other hand requires you to spray only once a day for a daylong protection from germs.

Q: I have a pet at home. How does Hygiene PRO protect my family and my pet?

A: Apply Hygiene PRO at least once a month at the areas your pet usually goes to and its tools such as cages, toys, car interior and feeding bowls etc. With that, your family and pet will be protected from bacteria, virus, fungi, algae or even protozoa. It also minimises odour.

Q: My family are pet lovers, especially my son; he loves to hug them. Is there anything I can do to ensure that he is hygienic at all times?

A: Hygiene 24 is just the product your child needs! It protects him from germs all day long with just one application – his personal antimicrobial shield.

Q: Will Hygiene 24 cause allergies, irritations or cracks to the skin?

A: No. Hygiene 24 is gentle to the human skin. You can use it daily without any worries! It also comes in a pocket-sized pack, making it convenient to bring along!

Q: What are the common hygiene issues we face when we have pets?

A: Animals are very vulnerable to germs, especially cats and dogs. In order to keep them clean and healthy, you need to send them regularly for ticks and fleas removal at veterinary clinics. However, you must never forget that your pets will linger all over the house and there could be bacteria all over the place. Therefore, we recommend you to use Hygiene PRO at least once a month for better hygiene.

Q: Will there be traces of germs on the toys, leash, cage and the places my pet regularly rests on?

A: Definitely. Therefore, you should use Hygiene PRO on all the areas and objects that your pet most frequently comes in contact with to prevent germs from harming them and your family. Simultaneously, you should also remind your children to use Hygiene 24 daily, especially before playing with their pet.

Q: My pet will move all over the house, such as the kitchen, toilet and my bedroom. Usually, they would lick almost anything they come across. Will there be plenty of germs all over the house?

A: Yes. The saliva and leftover food of pets are dirty. This promotes the growth of germs. Therefore, you should always clean their leftovers by disinfecting the area. However, the nose of animals are

very sensitive. The smell produced by regular sanitizers might irritate them. Therefore, we recommend Hygiene PRO, as it doesn't cause allergies or irritation to the nose.

Q: If I don't have a pet at home, will there still be the need to worry about hygiene?

A: Yes you do. There are always pests lurking around your home, such as cockroaches, rats, ants and flies. Those creatures might go all over your kitchen, clothes, table, sofa or even your food without you ever noticing; carrying germs all over your home. Therefore, use Hygiene PRO at least once a month to disinfect your home. It will minimise the chances of your family being infected by germs.

Q: Dirty hands? Why can't I just wash it off with water? What's the big deal with sanitizers?

A: Are you sure that your method of cleaning is absolutely correct? According to America's Infection Control Journal, most infectious diseases are transmitted by our hands. Therefore, the role of hygiene is more important than ever. Hygienic practices such as cleaning your hands correctly and thoroughly is a must. We recommend using Hygiene 24 once a day after hand washing to give you and your family a daylong protection.

Q: What about other pets such as guinea pigs, lizards and snakes? Is Hygiene PRO or Hygiene 24 suitable for them?

A: Yes. Animal stools contain germs which may threaten our lives. Therefore, use Hygiene PRO and Hygiene 24 to germproof your hands and everything else around you!

Q: What else can Hygiene PRO be used on?

A: It can be used on your gadgets, sofas, curtains, beds, toilet bowls and even the interior of your car! Hygiene PRO can also be used in hospitals, offices, clinics, factories, restaurants, kindergartens, schools, hotels and public transports such as aeroplanes, trains, and taxis and so on. It can be applied onto almost any surface!

Q: Are there really that many bacteria, viruses or fungi around us? I don't think I will be infected by germs that easily.

A: Door handles, faucets and flush buttons of toilet bowls are the main sources of infectious diseases. Therefore, germs can easily accumulate around toilets if its users are unhygienic.

Furthermore, germs can creep onto our body without us noticing whenever we sneeze, handle food, change diapers, clean after our pets, come in contact with rubbish and raw food containers, wash

our clothes, touch a cutting board, grab hold of kitchen towels and many more. This could potentially lead to death. Therefore, you should wash your hands regularly and correctly.

In order to give you and your family the best protection, apply Hygiene 24 onto your palms once a day. It protects your hands from germs all-day-long. You should also use Hygiene PRO to germproof your surroundings. It protects you for an entire month with just a single application. This will minimise the risks of infection

Q: Will Hygiene PRO and Hygiene 24 lose its effectiveness if used long-term and help the germs gain resistance towards it instead?

A: No. When germs or microbes come in contact with HD⁵, their cell walls will be disrupted and eventually destroyed through a process called “Lysis”. HD⁵ doesn’t alter the composition of microorganism, but instead destroys their structure. Therefore, germs will never have the chance to mutate and become resistant to Hygiene PRO or Hygiene 24.
